

## Ball Bearing

Ball Bearings are one of the most important components in a Router Bit's structure since they have a direct impact on design and performance. Dimar's Deep Groove Ball Bearings have shields installed on both sides and are factory-packed with lubricants. It eliminates the need for relubrication and therefore, reduces maintenance costs. Dimar's selected quality ball bearings have been designed to operate at rotating speeds well above the speeds of the Router Machines on the market.

\*Special ball bearing replaces the standard 1/2" ball bearing in Flush Trim Bits that have been sharpened a few times. Prolongs tool service.

Dimar's Precision Ball Bearing are factory fitted with an exclusive non-marring DELRIN sleeve for unsurpassed performance designed especially for routing solid surface materials such as DuPont's Corian. These new Super-Guide bearing assemblies will guarantee not to leave marks on the material being cut.
